Introduction

- **Background:** Provide context for your research. What is the broader problem or area of study?
- **Gap:** What is currently unknown or inadequately addressed?
- **Objective:** Clearly state your research question or hypothesis
- **Significance:** Why does this work matter?

Hypothesis: State your main hypothesis clearly in one sentence.

Methods

Study Design: Brief description of overall approach.

Participants/Samples:

- Sample size: n = XX
- Key characteristics
- Inclusion/exclusion criteria

Procedures:

1. Data collection procedure
2. Experimental intervention or measurement
3. Analysis approach

Step 1: Partici-
Step 2: Baseline
Step 3: In-
Step 4: Follow-
Step 5: Data Analysis

Statistical Analysis:

- Statistical test used (e.g., t-test, ANOVA, regression)
- Software: R 4.3.0, Python 3.9
- Significance level: $\alpha = 0.05$

Results

Finding 1: Main Result

Figure: Figure 1. Main result showing significant effect. Error bars represent standard deviation. * p ¡ 0.05, ** p ¡ 0.01, *** p ¡ 0.001.

Finding 2: Secondary Analysis

Table: Summary of key results

Condition	Mean	SD	n	p-value
Control	25.3	3.1	30	–
Treatment A	32.7	2.8	30	0.003
Treatment B	41.2	3.5	30	¡ 0.001

Finding 3: Additional Observation

Describe third key finding with reference to supporting data.

Discussion & Conclusions

Main Findings:

- Summary of first key result
- Summary of second key result
- Summary of third key result

Interpretation:

- How do these findings advance understanding?
- How do they compare to previous work?
- What are the mechanisms or explanations?

Limitations:

- Acknowledge key limitations honestly
- Discuss how they might affect interpretation

Future Directions:

- Next steps for research
- Potential applications

Key Takeaway

One-sentence summary of most important finding or implication.
